

ANYIA FAVOUR

SOFTWARE ENGINEER

+234 701 752 7538 | anyiafavour15@gmail.com | github.com/favjoyce | linkedin.com/in/anyia-favour-803842313

Full-stack software engineer who builds scalable backends, responsive frontends, and cross-platform mobile apps — from database design and microservices to pixel-perfect UI. Experience spans production deployment on Kubernetes/AWS, payment integrations, and AI-assisted features, with a track record of diagnosing and fixing real production issues under pressure.

SKILLS

Frontend: React.js, Next.js, TypeScript, JavaScript, HTML/CSS

Mobile: React Native, Expo, iOS & Android

Backend: Java, Spring Boot, Node.js, REST APIs, JUnit

Databases: PostgreSQL, MySQL, MongoDB, SQL, Firebase

Infrastructure: Docker, Kubernetes, AWS (EKS, ECR, ALB), Kafka, Jenkins, CI/CD

AI Integration: Groq API — AI assistants & triage/recommendation features

Tools: Git, Postman, Figma

EXPERIENCE

Full Stack Developer — *Vicas Couture*

- Built a full e-commerce platform — frontend, backend, authentication, and admin dashboard.
- Designed and maintained RESTful APIs consumed by web and mobile clients.
- Containerised services and configured CI/CD pipelines for reliable deployments.
- Implemented role-based access control and real-time inventory management.

Full Stack Developer & DevOps — *MediCore HMS — Personal Project*

- Built a hospital management system as 11 independent Java/Spring Boot microservices with a React/TypeScript frontend, communicating over REST and Kafka.
- Containerised every service with Docker and orchestrated with Kubernetes — tested on Minikube, deployed to production on AWS EKS via Amazon ECR, exposed through an Application Load Balancer.
- Integrated real payment processing (Flutterwave, Payaza) with webhook-confirmed invoicing, and a Groq-powered AI symptom checker for specialty/urgency triage.
- Diagnosed and fixed production issues including crash-looping services from placeholder credentials, Kubernetes killing healthy pods due to a Spring Security misconfiguration, memory pressure from undersized nodes, MySQL connection pool exhaustion, a silently-failing payment webhook, and a Kafka consumer that stopped receiving messages with zero errors.

Full Stack Developer — *Esteem Glorich Properties*

- Built a full real estate platform end-to-end — public web app, backend, and a separate admin dashboard with secure authentication for listings and inquiry management.
- Integrated an AI virtual assistant (Groq) to answer visitor questions and help users find listings in real time.

Volunteer Frontend Developer — *MyDonation*

- Built the donor dashboard and giving flow for a faith-driven giving platform connecting believers to verified churches and missions.
- Implemented recurring giving, multi-currency one-time gifts (NGN/USD/GBP), anonymous donation options, and full giving history with receipts.

Full Stack Developer — *MindHaven — Team Project*

- Co-built a mental health and wellness platform with community and guided-resource features.
- Handled frontend architecture and backend API integration end-to-end, including real-time notifications and authentication.

Freelance Frontend Developer — *Independent*

- Delivered web apps and landing pages for clients across different industries.
- Translated Figma designs into responsive, accessible, pixel-perfect interfaces.
- Integrated third-party APIs, payment gateways, and CMS platforms.

FOUNDER

Founder & Developer — *Graced* — *In Development*

- Building a platform connecting verified Christian professionals to job opportunities through church-community trust networks — Next.js/TypeScript frontend, Spring Boot backend, SQL.
- Designed a legally-scoped verification model so community trust and referrals carry hiring signal without introducing discrimination risk into employer screening.

SELECTED PROJECTS

Online Banking App — Real-time banking application with account management, transfers, and transaction history.

Vicas Couture Dashboard — Admin dashboard for inventory, order tracking, and analytics.

LinkedIn Mobile Clone — Pixel-perfect LinkedIn mobile clone built with React Native.

Location Searcher App — Real-time location search and navigation with interactive map integration.

EDUCATION

Diploma — Software Engineering, NIIT
